

CLAIMS

What is claimed is:

1. A method of creating a pathway in a tract of an animal, useful in association with a catheter having a tube coupled to a membrane initially
5 positioned substantially inside the tube, the method comprising:

inserting the tube into an tract of the animal; and

- extending the membrane from an opening in the tube and into the tract,
thereby creating the pathway in the tract, and wherein the membrane is
extended in the tract without sliding action between the membrane and the
10 tract.

2. The method of claim 1 wherein the extension of the membrane is caused by pressure.

- 15 3. The method of claim 1 wherein the tract is the cervical tract of the animal.

4. The method of claim 3 wherein the animal is a sow.

- 20 5. The method of claim 1 wherein the tube has a tapered nozzle located at the opening of the tube.

6. The method of claim 1 wherein the membrane is tapered.

7. The method of claim 3 further comprising depositing genetic
5 material into the animal.

8. A catheter useful for creating a pathway in a tract of an animal,
the catheter comprising:

a tube configured to be inserted into the tract of the animal; and

10 a membrane initially positioned inside the tube, the membrane
configured to extend from an opening in the tube and into the tract, and
wherein the membrane extends without sliding action between the membrane
and the tract.

15 9. The catheter of claim 8 wherein the extension of the membrane
is caused by pressure.

10. The catheter of claim 8 wherein the tract is the cervical tract of
the animal.

20

11. The catheter of claim 10 wherein the animal is a sow.

12. The catheter of claim 8 wherein the tube has a tapered nozzle located at the opening of the tube.

13. The catheter of claim 8 wherein the membrane is tapered.

5

14. The catheter of claim 10 wherein the membrane is configured to deposit genetic material into the animal.

10
